

## **SBR International EPC Company**

SBR provides Engineering, Procurement and Construction services on a global basis for more than a decade. It has been committed to adding value to its clients by successfully completing a wide range of large and complex projects in many countries throughout the world.

SBR was established in 1997 when there was a huge demand for giving engineering consultancy in a professional way to major industrial companies and complexes in Iran. The main activity for SBR was focusing on structural and civil part of the projects and in this regard many expansion projects in Iran managed or performed in this consultancy in a proper way. Soon SBR got a good reputation and further realized that the demand for our respectful clients is to get services for the whole project so all engineering disciplines started to be established having in mind to keep our “SBR Values”.

Now the company benefits from Structural, Civil, Mechanical, Architectural, IT, Electronic and Automation departments including very talented and educated employees who work under specialized and up to date Management systems.

In recent years, SBR has been expanded and driven forward for a Procurement and Construction company rather than giving professional Engineering services to serve its reputed Clients in Iran and abroad with the turn key projects. All implemented in the company based on new global standards such as PMBOK.

SBR made a reliable Suppliers chain among the best companies in Europe and established partnership agreements with some of the best Construction companies to add even more honors and values as an reliable and professional Industry partner who performed many National expansion projects in Iran and some giant projects abroad.

SBR is specialized in Industrial plants such as Steel, Iron ore, Lime and Dolomite and Refractory plants in addition to Material Handlings and Loading and Unloading Systems.

We look forward to having a nice Cooperation with you!

Hosein Majlesi

Managing Director
